

About the “ALOKSAK” ® Product:

The best way to learn about our product line is to test the samples provided. Here is a bit of information to assist you with some frequent questions. ALL OF OUR PRODUCTS ARE MADE IN THE USA. GSA approved. US Navy approved.

- 1) This is a ***patent protected*** product line. ***Five patents in all***, covering everything from the air-tight/liquid-tight seal and its manufacturing process to the actual concept of **ALOKSAK** ® and the FDA approved film. ***The only bag of its kind on the market.***
- 2) The ALOKSAK ® are manufactured to be ***liquid and air tight***. The patented technology is a transplant from the medical industry – essentially the seal was developed for liquid hazardous waste storage where being liquid-tight is a must. Once closed, the ALOKSAK is hermetically sealed.

Utility-type bags are not guaranteed to be air or liquid-tight by the manufacturer, very important fact! We have been certified watertight to a depth of 200 feet / 60 meters by SSI (Formally NASDS National Association of Scuba Diving Schools) and the ***United States Navy*** has tested and concluded that we are truly watertight! The only bag on the market able to make this claim – ***Tested and approved by the US Navy! Used by the FBI HAZMET, Law Enforcement, FEMA, and the military worldwide.***

- 3) The bags are ***durable and safe***. The bag film is the same material that is used for children’s teething rings – ***Medical grade, FDA approved material*** - and in its lifetime will outlast scores of those commercial non-air and non-liquid-tight resealables.
- 4) **Eco-wise:** As stated above, these ALOKSAK bags will outlast conventional bags several fold and are ***fully recyclable***. Fewer bags used, less chance for litter, less likely to present a hazard to wildlife (sea turtles and whales can ingest discarded disposable bags possibly resulting in death). ***ALOKSAK is intended for long-term reuse and then recycling.***
- 5) **Versatile: Air and liquid-tight, Dust-proof, Wearable, Stowable.** The system is excellent for all sorts of activities and applications outside of the obvious. For example, photographers love the ALOKSAK bags for protection from dusty environments and for long-term equipment storage. ***ALOKSAK ® is an elementproof storage system: Wearable – Stowable,*** thus versatile.
- 6) **Soft-sided:** This ***flexible storage system*** adapts to your space or gear. Small rigid systems don’t always fit that odd shaped item. Our supple liner material not only conforms to whatever is inside, it’s ***quiet and shatterproof!***
- 7) **Value oriented:** Compared to conventional element-proof storage systems – the truly air and liquid-tight ***ALOKSAK ® is the most versatile system available for the money!***

Key advantages over conventional systems:

- **Truly 100% Air and Liquid-tight** – Certified watertight to 200 feet/ 60 meters – Tested and approved by the US Navy EDU (Experimental Dive Unit). Zip closure baggies and roll-top systems are not.
- **Soft-sided** – Safe, shatterproof, quiet, holds oddly shaped objects.
- **Easy to use** – Simple as using a typical zip-closure type bag (and that's where the similarities to Zip-Locs end). Other soft-sided system requires several steps to close and even then they are not guaranteed air or liquid-tight.
- **Durable - The 6 mil. Film of the ALOKSAK is on par with PVC of the same thickness in terms of durability, but has a lower cold-crack tolerance (minus 60 F.) than that of PVC / Vinyl (0 degrees F.).**
- **Versatile: No matter what your activity is-** simply put, if you need to store just about anything from the elements (water, dust, rain, humidity, etc.) ALOKSAK™ is the answer.
- **Value:** Add it all up and this bag has no competition at any price.

What goes in an ALOKSAK?

Anything that needs protection from the elements, for example:

Wallets	Medications
Passports	Remote Keyless entry devices
Documents	Silver
Cell phones	Maps
Palm-Pilots	Books
Film	Food
Batteries	GPS
Jewelry	Clothing items
Cash	Tapes, CDs, Digital Cards
