

Attaching Machete to the goFAST Bug Out Bag

Use these instructions for ideas on how to attach the goFAST Machete to the goFAST Bug out Bag. You can modify the position and orientation to your liking. Remember, the machete is sharp, so always use care when handling, removing, or using the machete.

Step 1 – There are 2 adjustable straps above the water bottle pockets on either side of the pack. Clip the doubled up end off the strap you intend to use. We then put tape over the end to prevent fraying. Remove the strap from the black adjustment clip. Generally if you are right handed – cut the left strap for proper positioning.

Step 2 – Thread the strap through the belt loop on the machete sheath. You can thread it over or under – that will permit you to orient how whether the cutting edge is up or down when you remove the machete. Feel free to experiment. Thread the end into the black adjustment clip.

Step 3 – Position the sheath and lay it over the water bottle pocket. You can now use the lower strap to stabilize the bottom of the sheath against the water bottle pocket. Note that the water bottle can be in the pocket.

Result – The sheathed machete will ride securely on the backpack.

To withdraw, push up on the sheathed tip (raising the handle and backpack slightly). This puts the handle in reach of your opposite hand. Use caution when withdrawing.

To replace – remove the backpack and reinsert into the sheath on the ground. **Do not try to reinsert while wearing the backpack (dangerous).**
